BEADLEJUICE ROCK DRILL OIL

PRODUCT DESCRIPTION AND FEATURES:

BEADLEJUICE ROCK DRILL OIL is a blend of alpha and poly alpha olephin base oil stocks. It contains extreme pressure, high heat and oiliness additives to protect metal parts from wear and / or corrosion. The special additive package provides a tough, durable film on all points of contacts during drilling activity.

BENEFITS:

BEADLEJUICE ROCK DRILL OIL provides:

- Durable film strength with anti-foamant properties
- Long lasting rust and corrosion protection
- High heat / high pressure additive package which helps to withstand shock loads and prevents every day wear.

PRODUCTS RECOMMENDATIONS AND APPROVAL:

BEADLEJUICE ROCK DRILL OIL is recommended in all mining / drilling activities which includes heavy "metal to metal" contact and where heavy "metal to rock" contact is expected. BEADLEJUICE ROCK DRILL OIL can be used in all down hole drilling situations where high pressure and high heat is expected, and the need for additional friction reduction is necessary. BEADLEJUICE ROCK DRILL OIL can be added quickly and easily to any mud system and has little effect on the rheological properties of the drilling mud.

PRODUCT APPLICATION AND MAINTENANCE:

During drilling operation temperatures may vary widely from low ambient to localized hot spots due to friction contact. Please monitor when and where possible. As with any equipment, those lubricated with BEADLEJUICE ROCK DRILL OIL should be monitored for insufficient or inadequate lubrication which can cause the rapid wear and / or catastrophic failure of equipment. Supplying the proper amount of oil to the equipment in need of lubrication is critical to the success of its operation. Contact your Production Enhancement Systems, LLC representatives with any and all questions.
