## **SCALE INHIBITOR STICK – WST**

SCALE INHIBITOR STICKS contain chemicals that help prevent carbonate types of scale from depositing down holes in oil and gas wells, casing, tubing, and flow lines. It is also very useful to include ACID STICKS in this type of treatment since the ACID STICK will remove carbonate types of scale after being deposited and also neutralizing scale that is in the solution.

The SCALE INHIBITOR STICK (type WST) is a water soluble tube with salt caps and filled with scale inhibitor and dispersing agent. This product does not begin to degrade until the temperature reaches 140°F unless it is falling in water. In water it will dissolve faster; however, the scale inhibitor inside the tube dissolves very slowly.

Treatment using the SCALE INHIBITOR STICK varies with the volume of water being produced and should be adjusted for high volume wells. In many cases one (1) or two (2) sticks every other day may be sufficient. Occasional use of ACID STICKS will also be helpful.

For sufficient use, sticks should be placed as close as possible to the source of scaling water.

SCALE INHIBITOR STICKS are non-toxic, but should be handled and treated like any chemical product. Avoid contact with eyes and skin. Dispose of stick in prescribed manner according to local and federal regulations.
