Glycol Ether DPM 99%

General Description:

Glycol Ether DPM - (Dipropylene Glycol Monomethyl Ether) - is a colorless, combustible liquid with low toxicity having a mild, pleasant odor. It is completely water soluble, miscible with a number of organic solvents and has good solvency for a number of substances.

Benefits & Applications:

Glycol Ether DPM provides good solvency for a wide variety of resins including acrylics, epoxies, alkyds, polyesters, nitrocellulose and polyurethanes. Glycol Ether DPM has a relatively low vapor pressure (volatility) and evaporates at a slow rate. Key properties for coating applications include complete water miscibility and good coupling ability. Surface tension reduction and slow evaporation are some of the benefits of using Glycol Ether DPM in cleaning formulations. DPM has a low odor and slow evaporation rate. It is a good choice for wax strippers and floor cleaners, which are spread over a large area.

Product Data and Technical Information:

Glycol Ether DPM is a high-performance industrial solvent for paints and coatings, cleaners, inks, and a variety of other applications. Glycol Ether DPM has become a solvent of choice for reformulations and new product development.

PACKAGING OPTIONS:

Glycol Ether DPM comes packaged in 1 - gallon jugs, 5 - gallon pails, 55 - gallon drums and 275 - gallon totes.
